

## **GEOG3010 Geographies of Health**

Dr Samantha Cockings and  
Professor Graham Moon

### Whats this about?!

Health is a critical part of our everyday life. Where we live, work and play affects our health, be it through contact with hazards such as pollution or by influencing our access to hospitals and health care.

### What will we do?

This module

- introduces you to the concepts, methods and applications of geographies of health
- challenges you to evaluate contemporary health and health care issues for yourself

This module is optional for Geographers and students on other degrees. It is taught by Samantha Cockings and Graham Moon, drawing on their research in environmental, social and cultural health.

### Employability

This module develops your skills in independent research, writing, group work and debating. It is relevant to careers such as planning, social or public policy, health care management or environmental health.

### Assessment

Assessment is by coursework and exam. Sessions are a mixture of lectures and group work.

“We all have our own geographies as well as our biographies”  
Gatrell & Elliott (2009)
