

Careers and Employability Service
Additional resources and information for
Physics and Astronomy

Welcome:

We have developed this recourse pack to help you research specific job sectors which may be of particular interest to Physics and Astronomy students.

- Prospects.ac.uk - Options with Physics, as well as pages on: Your skills, job options, career areas, further study, what next, case studies, contacts and job search sites.
- Allaboutcareers – What can I do with a Physics Degree?
- Targetjobs – What can I do with a Physics Degree?
- Physics.org – Find out where Physics can take you
- [Careers and your Future](#) - on the School of Physics and Astronomy website

SKILLS:

Employers see a physics qualification as an indication of someone who will immediately be an asset to the organisation. This is because physics requires the following attributes:

- A logical and numerate mind
- The ability to solve problems
- Communication skills, developed through report-writing and presentations
- Computing and practical skills
- Teamwork and flexibility (essential for lab work and projects)

From www.physics.org

Other key skills include the ability to:

- Analyse and assess information and data
- Apply numeracy, communication and information technology skills efficiently
- Use effective interpersonal and team working skills including demonstrating an appreciation of different points of view
- Self-manage, think independently, set tasks and solve problems.

Employment Activities within your degree:

The Physics and Astronomy department are members of the [South East Physics Network](#), which are focussed on providing you industry led presentations, seminars and discussion forums on job searching techniques and CV advice.

Your degree programme will provide you links to industry to find out about the latest placement and graduate vacancies in the sector, as well as providing you access to arranged-visits to local employers. Employers also sponsor final year projects and research collaborations within the department. In previous years students have received bursaries for summer placements and hosts have included NPL, QinetiQ and Symetrica.

Tutors and lecturers also ensure they are up to date with employment within the sector and receive training on activities such as writing you a reference for a future employer.

A number of [work experience](#) opportunities are also offered by Career Destinations in addition to a variety of [events, tailored workshops and presentations](#) to provide advice and support on how to succeed within the sector. For more information and guidance please go to the [Career Destinations website](#).

Employment:

Physics and Astronomy graduates enter a very wide range of careers - both scientific and non-scientific. The following examples give a sense of the range of jobs Southampton graduates have gone into over recent years. Data has been collected from graduates completing the [DLHE Survey](#) six months after graduation and from alumni information.

- Engineering services engineer
- Accountant
- Business support officer
- Clinical scientist
- ICT technician
- Offshore geophysical engineer
- Project physicist
- Radiation detection specialist
- Research associate
- Research scientist
- Residual radiation analyst
- Systems engineer
- Trainee accounts assistant
- Trainee medical physicist

Finding Job Vacancies:

As a graduate from Physics and Astronomy you can go into a wide range of occupations, some open to all graduates, and some particularly relevant to your degree. Information and

advice about how to find out about employment opportunities can be found on our [Job Hunt webpages](#) and on the [Prospects](#) website.

When applying for vacancies you may need support in constructing a CV, filling out an Application Form, drafting a Cover Letter or preparing for Interview. We offer support on all of these areas via our [Job Application Resources webpages](#)

Physics-related Jobs and Internships:

The information below can be used to find job vacancies or industrial connections related to your programme, and/or to build understanding of relevant roles. Consider exploring job opportunities, career advice sites and associations/societies related to your degree programme or interests. Alongside this list make the most of the opportunities provided by the University to meet and network with employers and alumni from Physics and Astronomy and learn from their experiences.

- **Institute of Physics**
The IOP is committed to providing members with accurate, up-to-date, careers information and resources. The resources offered are tailored to help you make the most of your potential as a physicist. [Careers information and resources](#)
- **New Scientist** – Each year a [Graduate Careers Special](#) is produced providing advice, information and opportunities.

Postgraduate Study and Research:

Approximately half of graduates from Physics and Astronomy pursue [further study](#) opportunities following completion of an undergraduate programme.

For many people a PhD provides an important part of developing a career in science. You will generally require a good 2:1 in your first degree and will need to demonstrate the ability to sustain interest in your research topic for 3 to 4 years. Further information is available from the [Physics and Astronomy website](#).

PhD:

University of Southampton
University of Cambridge
University College London
University of Oxford
University of Liverpool
University of Bristol

MSc:

Aeronautical Engineering - Cranfield University
Mechanical Engineering - City University
Physics - Imperial College
Hospital and Health Service Management - University of Birmingham

PGCE - Secondary University of Exeter, University of Southampton

Aircraft Pilot training UK Private Institution
