

Exploring the global landscape. Undergraduate degree programmes in Geography

Teachers' Visit Day: Friday 13th July 2012

The University of Southampton is one of the UK's leading centres for the teaching of Geography undergraduate degree programmes. We are internationally recognised for the excellence of our teaching and research, and we attract students and academics from all over the world.

Our subject tackles the major challenges facing the world today, from global environmental change to economic transformation. Through expanding geographical and environmental knowledge, we play a major role in informing and influencing government policy both at home and abroad.

Our students are a diverse group of individuals who share a passion for geography, a fascination with changing natural and social environments and a desire to learn and be challenged. Southampton graduates are highly successful in the job market. They enter careers in many different fields in the private and public sectors, ranging from environmental planning, consultancy and marketing to financial management, local government and IT.

A photograph of four students (three women and one man) crouching in a grassy field with trees in the background. They are looking at a small object held by one of the men. A yellow geomatics instrument is on the ground in the foreground.
