Programme Specification

BSc (Hons) Midwifery with Advanced Standing (with eligibility for NMC part 2 registration) (2020-21)

Subject to revalidation

This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities that are provided.

Programme Overview

Brief outline of the programme

At Health Sciences, everything we do is powered by world-class research. In a culture of discovery, collaboration and innovation, we pioneer advances in clinical practice and health service delivery and join forces with other disciplines to tackle critical healthcare challenges. Our career-ready graduates are equipped to become leaders in their profession; ambitious to take on current and future roles in this fast-changing, global sector.

The award of Bachelor of Science (Honours) Midwifery with eligibility to apply for registration on the Midwifery Part of the Nursing and Midwifery Council (NMC) register is a 2 year, full time programme, designed to meet
Professional Regulatory Body (NMC) and University academic award requirements.

The programme is underpinned by a set of beliefs and values that espouse an holistic woman centred approach to care, which is provided by competent and knowledgeable practitioners in an empathetic, trustworthy, and compassionate manner. This is consistent with the principles of the 6 C’s (Cummings and Bennett, 2012), Midwifery 2020 (2010), Better Births (NHS England, 2016) and the International Confederation of Midwives (ICM) (2017) definition of a midwife. This programme has adopted a values-based approach from recruitment to graduation. It recognises the need for midwives to have a clear vision of their own potential in order to embrace a greater public health role and to meet the challenges of reducing inequalities and improving maternal and family health and well-being thus incorporating the evidence-informed framework for maternal and newborn care (Renfrew et al, 2014).

The programme embraces an adult learning philosophy to support your development as an autonomous midwife who provides evidence based care within an ethical and legal framework. Midwives need to have leadership and management capabilities to respond flexibly, and effectively, to the changes and technological advances in the health care environment. Through reflective practice you will develop the knowledge, skills and attitudes to ensure you are fit for the profession, award and practice. This includes the development of skills for lifelong learning.

The modular design of this programme is based on the University agreed modular curriculum structure reflecting the European Credit Transfer System (ECTS) that requires all programme-based learning activities to be valued and awarded credit. All modules are core. For registration as a midwife on the NMC professional register (NMC, 2009), this programme has been designed to be two years with 45 weeks programmed activity per year. The School endeavours to recognise all student learning with one ECTS equating to 25 hours of student effort/workload. As a result of these two factors, the Bachelor of Science (HONS) Midwifery has more credits than a traditional BSc to capture the student effort associated with clinical practice activity and the NMC (2009) and EU legislation requirements.

The programme runs in parallel with the Master of Science Midwifery, which is also a 2 year programme, with eligibility to apply for registration on Part Two of Nursing and Midwifery Council (NMC) Register. As both Bachelor of Science (HONS) Midwifery and Master of Science Midwifery require the same professional knowledge, skills and attitudes, the programmes have been planned in parallel with identical practice requirements, so practice modules are common to both programmes, in effect ‘plaited’ together. In addition, there are shared taught components with the BSc (HONS) 156-week midwifery programme and with other Allied Health programmes. There is differentiation through academic output and learning by programme. Commonality across programmes lay with the registration pathway shown in terms of clinical practice. The programmes have been designed so that each group has academic modules appropriate to their programme based on the level descriptors from the Quality Assurance Agency (QAA 2014). This includes programme specific module learning outcomes and assessments, learning resources, seminars covering theory and practice aspects of the programme, and academic tutorial support to facilitate academic development appropriate to the level of study. You will be assigned a personal academic tutor to support your programme requirements.

The Midwifery programme team are committed to the provision of high quality education that is responsive to the changing state and knowledge in health and to meet client needs and expectations (WHO, 2013; Fraser, 2011; Quinn (Chair) et al, 2015). We are committed to working in a way that is consistent with domains within the midwifery educator core competencies (WHO, 2013) as well as National and School standards.

The School is committed to inter-professional learning so a number of core modules are offered in a shared learning capacity with other professional student groups e.g. healthcare scientists, nursing, physiotherapy, occupational therapy and podiatry. The programme comprises a minimum of 50% practice activity, including caseload practice, and to a minimum of 40% academic learning. Practice delivery is designed so that on successful completion of the programme, you will have met the requirements of the professional and statutory bodies (NMC 2009), and thus complied with the current European Directive 2005/36/EC of the European Parliament and of the Council (2005) on the recognition of professional qualifications. This programme fulfils the Modernised Directive 2013/55/EU requirements of a minimum of 3600 programme hours. Full information about contact hours is provided in individual module profiles.

The value to you of undertaking the Master of Science in Midwifery, with Nursing and Midwifery Council (NMC) Part Two registration is the;

- recognition of the value of your previous learning, enabling high calibre graduates to enter the profession, thus widening the entry gate to the profession;
- acknowledgement of your pre-existing graduate expertise so as to encourage you to be able to reach the
highest levels of professional practice. This means you will be able to provide advocacy for women and maternity services, not only alongside individual women, but also within local, national and international maternity services;

- further development of your graduate knowledge applied to midwifery practice to provide high quality, evidence based, woman centred care, as well as to articulate wider public health messages to local communities;
- opportunity to work with other graduates from different disciplines so that together you can bring that knowledge and expertise to Midwifery practice. This should foster creative and innovative ways of thinking to the practice and delivery of maternity services;
- opportunity to develop your abilities, knowledge and skills to a deeper, critical level and thus progress more rapidly to leadership roles within the spheres of practice, research, management and academia.

Your contact hours will vary depending on your module/option choices. Full information about contact hours is provided in individual module profiles.

Learning and teaching

The School is committed to providing you with a student-centred, friendly, supportive and receptive environment in which you will be able to reach your full potential and assume responsibility for your own learning (Fraser, 2011). The education content is underpinned by the sciences, research & evidence-based practice, which together provide the essential components for reflective practice and life-long learning. This means you will have the potential for a diverse and stimulating career in midwifery. You are supported to develop your analytical skills through an experiential, problem-solving learning approach to acquire knowledge and skills in a contextual and integrated manner. This is achieved through the use of: key-note and expert lectures; student and tutor-led tutorials and seminars; debates; case-based learning; inter-professional and trans-disciplinary learning; group work; directed and self-directed learning activities; practical and simulation skill based sessions; experiential learning; practice placement experience; web-based learning and digital resources. The programme team will draw upon established and proven approaches embedded in other successful programmes to support your transition to academic study and the requisite academic skills.

You are expected to apply learning from inter-professional education to your own professional context. One strategy to achieve this is through the Values Based Enquiry journey (VBE) (appendix 1).

This programme has a strong values based ethos which supports your development as a midwife who is prepared for the predicted challenges of the future, demonstrating the personal qualities and character which identify you as University of Southampton graduate.

Midwives graduating from the University of Southampton will be:

- committed to delivering person-centred care underpinned by values of care and compassion.
- self-aware, possessing self -belief and self-efficacy and will have developed the courage and character necessary to speak out and to 'make a difference' as practitioners and leaders.
- insightful analytical thinkers with the ability to problem solve and to generate evidence for the enhancement of practice.
- knowledgeable and skilled professionals who are competent and confident in practice.
- demonstrating an inquiring mind and approach to midwifery care provision.
- embracing technological changes and will have vision and digital literacy to innovate improving health outcomes.

To foster the VBE philosophy there are timetabled seminars throughout each academic year. These facilitated sessions are planned to integrate theory and practice, to promote reflective practice and to challenge yourselves and others to achieve best practice.

Assessment

The School enables you to demonstrate your successful learning using fair and reliable assessment methods. These include formative and summative assessments such as: essays; written case studies; unseen examinations; conference style presentations; professional conversations; critical appraisal of literature; practical examinations; group guided learning activities, projects, observed structured clinical examinations, recordings of sessions and presentations. There are practice placement assessments in each year, some of which incorporate feedback from women to whom you have provided care, along with regular assessment and feedback from clinical midwives.

Each assessment component is required to be passed and any component that is failed at first attempt is required to be retaken before the module can potentially be successfully achieved.
Special Features of the programme

- The programme leads to eligibility to register with the NMC with very high employability for successful students.
- At least 50% of programme time is spent in professional practice.
- Learning aspects of the curriculum are undertaken with other health and social care professionals.
- Learning includes access to simulation for clinical skills and also the Values Based Enquiry journey.
- All modules are core.

Please note: As a research-led University, we undertake a continuous review of our programmes to ensure quality enhancement and to manage our resources. As a result, this programme may be revised during a student's period of registration; however, any revision will be balanced against the requirement that the student should receive the educational service expected. Please read our Disclaimer to see why, when and how changes may be made to a student's programme.

Programmes and major changes to programmes are approved through the University's programme validation process which is described in the University's Quality handbook.

Educational Aims of the Programme

The aims of the programme are to:

- Provide you with the detailed knowledge and skills necessary to equip you for a career in Midwifery (Midwifery 2020, 2010; ASPiH, 2016).
- Provide you with sufficient clinical experience to equip you for a career in Midwifery.
- Develop your competence in applying professional skills to the autonomous practice of normal Midwifery in accordance with 'The Code: Standards of conduct, performance and ethics for nurses and midwives' (NMC 2015).
- Provide a values-based journey through which you will develop your own beliefs and values, while demonstrating the appropriate attitudes for high quality holistic midwifery practice.
- Develop key, transferable skills for general use in graduate employment to enable you to become a provider of quality maternity care for women and families.
- Develop critical and analytical competence so that you become a thinking user of research evidence to improve care and outcomes for women, neonates and families.
- Provide opportunities for you to learn with, and from, other healthcare professionals so that you develop competence in inter-professional practice to meet the needs of women and their families requiring maternity services.
- Provide you with the capacity for reflective practice and life-long learning.
- Provide a responsive curriculum that acknowledges the need for a multi-faceted, multi-agency working environment based on strengthening individuals, families and communities.
- Enable you to work within a diverse and changing health and social care environment, responsive to demographic, lifestyle and scientific challenges.
- Develop you to be skilled and safe, empathic and trustworthy, with the capacity to influence future midwifery care based upon the principles of autonomy and accountability within multidisciplinary and multi-agency teams.
- Prepare you to meet the requirements of:
  - The Nursing and Midwifery Council Standards for pre-registration Midwifery education (2009) for entry to the Midwifery Part of the NMC professional register.
  - International Confederation for Midwives (ICM) education standards (2010 amended 2013)
  - The University criteria for the award of an honours degree.
Programme Learning Outcomes

Knowledge and Understanding

On successful completion of this programme you will have knowledge and understanding of:

A1. the philosophical foundations of Midwifery practice;
A2. current theoretical perspectives on Midwifery practice;
A3. the anatomical, physiological, neurological, biomechanical, psycho-social, pharmacological and pathological principles related to maternal, fetal and neonatal wellbeing;
A4. the ethical, moral and legal issues in relation to Midwifery practice;
A5. the importance of clinical governance and its relevance and application within Midwifery and related Midwifery regulation;
A6. the requirements of clinical governance as demonstrated through the theoretical and scientific basis of research, research methodology, clinical audit, and evidence-based practice;
A7. the connections between clinical leadership, management and health outcomes;
A8. current local, national and international public health agendas, and policy and the role of the midwife in contributing to health outcomes and comprehensive knowledge of the diversity and social inclusion agenda;
A9. the modern provision of midwifery care in the public and private sectors including structure, drivers of change and policies.

Teaching and Learning Methods

In the context of midwifery, the methods will include:

- an emphasis on developing a focussed approach to midwifery to assist you in engaging with learning resources so that you may understand their relevance and enhance your scholarly and academic development
- a sequence of lectures and seminars to introduce new and review knowledge, concepts and processes
- self-directed learning activities and opportunity for preparation in order to make choices and present outcomes to peers
- opportunity to work individually, in pairs/teams and value-based learning groups to complete given tasks and take part in reflection and peer review processes
- personal and/or interactive group activities specifically supported by facilitators/experts/resources/ technology/mixed media
- varied learning activities (course completion/compulsory) – which introduce an element of choice in learning and assessment in order to more fully meet individual learning needs and preferences, thereby fulfilling HE responsibilities under the equality and diversity agenda

Assessment Methods

A range of assessment methods are adopted which ensure that graduates demonstrate academic knowledge, critical thinking and practical ability. Links between module learning outcomes and a range of learning activities (including course completion), formative and summative assessment methods are developed and matched carefully match to ensure relevance to practice. The types of assessments adopted include:

essays, protocols, unseen exams, multiple choice questions, short answer questions, case studies, viva/practical exams, creative/interactive use of media and technology, individual/group presentations, poster work/displays and teamwork activities.
**Subject Specific Intellectual and Research Skills**

On successful completion of this programme you will be able to:

B1. formulate strategies for selecting appropriate and relevant information from a wide range of professional and inter-professional sources of knowledge;

B2. synthesise and critically appraise information from a variety of sources to gain a coherent and evidence-based understanding of midwifery theory and practice and thus demonstrate the use of problem-solving and decision-making skills;

B3. reflect critically and constructively, on your and other professionals’ practice to recognise the limits of your competency and the possibilities for innovation in practice;

B4. utilise appropriate study skills to facilitate your own learning;

B5. analyse, interpret, evaluate evidence and engage in debate and discussion in areas of professional controversy and future professional development and initiate change appropriately;

B6. construct reasoned argument concerning the funding and ethics of modern health and social care;

B7. identify and evaluate your contribution and that of other professionals relating to the needs of women and their families from physical, psychological, environmental, social, emotional and spiritual perspectives to understand and value the diversity and complexity of human behaviour demonstrating the ability to form critical judgements;

B8. communicate with other professionals and agencies working in collaboration with maternity services, to ensure that the needs of individuals, families and communities are met.

**Teaching and Learning Methods**

Will include:

- Active participation in learning groups
- Reading, critiquing and applying a range of evidence courses and research publications
- Lectures, seminars, and group projects
- Self-directed investigation and critique
- Use of technology and digital literacy

**Assessment Methods**

Will include:

- Critical review of literature applied to chosen module focus
- Significant evidence/research-based project in the final year
- Presentations and posters

**Transferable and Generic Skills**

On successful completion of this programme you will be able to:

C1. communicate effectively in a variety of forms to a variety of audiences;

C2. critically evaluate academic, clinical and professional performance and utilise research skills to identify and propose solutions to problems to facilitate woman centred care;

C3. effectively manage time and prioritise workload to sustain efficient and effective practice while demonstrating self-management;

C4. work autonomously and develop leadership skills to influence and supervise others and identify personal needs for skill development on an on-going basis;

C5. demonstrate ethical understanding and safe professional practice showing care and compassion for clients and colleagues through the promotion of individual rights, respecting their dignity and diversity.
in a culturally sensitive manner, and identify appropriate action in relation to such issues;

C6. use risk assessment and management strategies to demonstrate adherence to safe practice by ensuring the safety of yourself as a practitioner, your client and others who utilise your service;

C7. utilise creative problem-solving skills in a variety of theoretical and practical situations whilst negotiating informally with peers and formally with members of appropriate organisations to identify and propose solutions to problems, in relation to midwifery;

C8. utilise information management/technologies to support learning, practice and research activities and take responsibility for this;

C9. liaise with, and contribute confidently and appropriately to discussion utilising evidence-based practice to support and justify your argument gathering and analysing relevant information from a wide variety of sources using appropriate manual and electronic systems;

C10. manage time and resources appropriately and demonstrate self-management;

C11. manage own well-being, for example, professional and personal emotions and stress;

C12. manage change effectively and respond to changing demands;

C13. evaluate your own personal, academic, clinical and professional performance through reflective practice in order to enhance your own personal development;

C14. recognise and take responsibility for your ongoing personal and professional development.

Teaching and Learning Methods
Will include:
- Inter-disciplinary group work and practical skills workshops
- Lectures and seminars
- Guided reading
- Active engagement with e resources
- Portfolio development
- Learning in practice
- Clinical simulations, role play exercises, action learning groups and small and large group discussions.

Assessment Methods
Will include:
- Course completion requirements for statutory and mandatory skills
- Completion of a group health education/promotion pack targeted at a selected audience
- Practice Placement assessment

Subject Specific Practical Skills

On successful completion of this programme you will be able to:

D1. role model the practise of autonomous, professional, responsible and safe midwifery care which underpins the delivery of intelligent high quality compassionate, women-centred, evidence-based midwifery practice;

D2. promote and advocate the concept, knowledge and practice of women and family centred care;

D3. work in partnership with other health and social care professionals and agencies, service users, and families in all settings ensuring decisions about care are informed, shared and owned;

D4. appropriately apply current legislation paying special attention to the protection of vulnerable individuals and groups;

D5. plan, implement and evaluate, in partnership with women and their family, high quality care within normal pregnancy, labour and the puerperium;
D6. recognise and respond accordingly to care for all women including those with complex mental health, medical, surgical obstetric and social needs;

D7. empower women to have the capacity to take responsibility for their own health;

D8. intelligently apply the patho-physiology of medical/surgical and obstetric conditions, including relevant pharmacology, which may affect maternal, fetal or neonatal wellbeing;

D9. use appropriate diagnostic and decision-making and risk assessment skills and safely use invasive and non-invasive procedures, medical devices, and current technological and pharmacological interventions;

D10. understand and incorporate the role of the Professional Midwifery Advocate, within clinical governance processes, to maintain and improve the quality of midwifery practice and standards;

D11. identify the clinical leadership skills inherent in managing midwifery care and, when appropriate, to initiate and coordinate inter-professional care;

D12. develop practical skills (including statutory and mandatory) appropriate to the role of the midwife, gained across both theory and practice environments.

Teaching and Learning Methods

Will include:

- Learning in practice opportunities
- Lectures, seminars, tutorials to introduce new and review knowledge, concepts and processes that support the development of practical skills
- Opportunities for experiential learning which focus initially on personal experience to inform professional development of skills and empathy
- Self-directed learning activities
- Opportunity to work individually and with others in pairs and learning groups to complete given tasks and develop reflection and peer review skills
- Personal and interactive group activities specifically supported by facilitators/experts/resources/technology/mixed media
- Active engagement with local and national resources available through Health service resources
- Developing digital and technological advances in health care

Assessment Methods

Will include:

- Case based practical assessments
- Written assignments
- Critical reflection
- Presentation / viva voce
- Assessment of, and in, practice

Progression Requirements

The programme follows the University’s regulations for *Progression, Determination and Classification of Results: Undergraduate and Integrated Masters Programmes*. Any exemptions or variations to the University regulations, approved by AQSC are located in *section VI of the University Calendar*.

Support for student learning

There are facilities and services to support your learning some of which are accessible to students across the University and some of which will be geared more particularly to students in your particular Faculty or discipline area.

The University provides:

- library resources, including e-books, on-line journals and databases, which are comprehensive and up to date; together with assistance from Library staff to enable you to make the best use of these resources
- high speed access to online electronic learning resources on the Internet from dedicated PC Workstations onsite and from your own devices; laptops, smartphones and tablet PCs via the Eduroam wireless network. There is a wide range of application software available from the Student Public Workstations.
- computer accounts which will connect you to a number of learning technologies for example, the Blackboard virtual learning environment (which facilitates online learning and access to specific learning resources)
- standard ICT tools such as Email, secure filestore and calendars.
- access to key information through the MySouthampton Student Mobile Portal which delivers timetables, Module information, Locations, Tutor details, Library account, bus timetables etc. while you are on the move.
- IT support through a comprehensive website, telephone and online ticketed support and a dedicated helpdesk in the Hartley Library.
- Enabling Services offering support services and resources via a triage model to access crisis management, mental health support and counselling. Support includes daily Drop In at Highfield campus at 13.00 – 15.00 (Monday, Wednesday and Friday out of term-time) or via on-line chat on weekdays from 14.00 – 16.00. Arrangements can also be made for meetings via Skype.
- assessment and support (including specialist IT support) facilities if you have a disability, long term health problem or Specific Learning Difficulty (e.g. dyslexia).
- the Student Services Centre (SSC) to assist you with a range of general enquiries including financial matters, accommodation, exams, graduation, student visas, ID cards
- Career and Employability services, advising on job search, applications, interviews, paid work, volunteering and internship opportunities and getting the most out of your extra-curricular activities.
alongside your degree programme when writing your CV

- Other support that includes health services (GPs), chaplaincy (for all faiths) and 'out of hours' support for students in Halls and in the local community, (18.00-08.00)
- A Centre for Language Study, providing assistance in the development of English language and study skills for non-native speakers.

The Students’ Union provides:

- an academic student representation system, consisting of Course Representatives, Academic Presidents, Faculty Officers and the Vice-President Education; SUSU provides training and support for all these representatives, whose role is to represent students' views to the University.
- opportunities for extracurricular activities and volunteering
- an Advice Centre offering free and confidential advice including support if you need to make an academic appeal
- Support for student peer-to-peer groups, such as Nightline.

Associated with your programme you will be able to access:

- Your programme lead, the Lead Midwife for Education, personal academic tutor, senior tutor, module leader, midwife assessor, practice educator for midwifery students, Supervisor of Midwives as well as the wider School and support resources while in placement via the School support for learning in practice processes;
- facilities based at some of the sub campuses/study centres.

Methods for evaluating the quality of teaching and learning

You will have the opportunity to have your say on the quality of the programme in the following ways:

- Completing student evaluation questionnaires for each module of the programme.
- Acting as a student representative on various committees, e.g. Staff/Student Liaison Committees, School Programmes Committee OR providing comments to your student representative to feedback on your behalf.
- Serving as a student representative on Faculty Scrutiny Groups for programme validation.
- Taking part in programme validation meetings by joining a panel of students to meet with the Faculty Scrutiny Group.

Further details on the University's quality assurance processes are given in the Quality Handbook.

Career Opportunities

The Bachelor of Science (Hons) Midwifery gives you the preparation for a life-long career as a midwife that is different, stimulating and rewarding every day. You will have the opportunity to enhance the health of individual women, their families and the nation by promoting good health, such as breast feeding, diet, exercise and general health.

As you consolidate your midwifery experience as a Midwifery graduate you can move into specialist roles, such are caring for vulnerable groups, or wider public health roles, or related professional groups such as Specialist Community Public Health Nursing.

You could move into leadership. As you consolidate your midwifery experience as a Midwifery graduate you will lead the care of a client group, supervising with support workers, and other midwives. You will develop the expertise to supervise, challenge and lead teams to provide high quality midwifery practice. You have choices from then on to develop your clinical expertise to provide expert care to clients with particular/complex care needs. You might wish to develop your leadership of midwifery teams, service projects, with the potential of moving into significant NHS leadership activity, such as supervisor of midwives, consultant midwife, Head of
Midwifery services, or into more general Healthcare leadership roles.

Other choices include undertaking postgraduate studies at Masters/or and Doctorate level, leading to a career in research, which can be grounded in practice, or across education and research leading to an academic career. Research and/or education can impact national and international agendas. Alternatively, you may like to consider a joint appointment role between two or more of the following: practice/management/research/academia.

**External Examiner(s) for the programme**

Name: Ms Amanda Hutcherson - City University

Students must not contact External Examiner(s) directly, and external examiners have been advised to refer any such communications back to the University. Students should raise any general queries about the assessment and examination process for the programme with their Course Representative, for consideration through Staff: Student Liaison Committee in the first instance, and Student representatives on Staff: Student Liaison Committees will have the opportunity to consider external examiners' reports as part of the University's quality assurance process.

External examiners do not have a direct role in determining results for individual students, and students wishing to discuss their own performance in assessment should contact their Personal Academic Tutor in the first instance.

**Please note:** This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if they take full advantage of the learning opportunities that are provided. More detailed information can be found in the programme handbook.
Appendix 1:

Students are responsible for meeting the cost of essential textbooks, and of producing such essays, assignments, laboratory reports and dissertations as are required to fulfil the academic requirements for each programme of study. In addition to this, students registered for this programme also have to pay for:

### Additional Costs

<table>
<thead>
<tr>
<th>Type</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other</td>
<td>You will be expected to self-fund textbooks, travel outside of placements including any elective experiences, a university approved calculator for medicines management examinations, and a laboratory coat for your health sciences module. These requirements will be made explicit in the module specifications.</td>
</tr>
