- Polysilicon
- Contact Window
- Metal

Abstraction

Levels of Abstraction

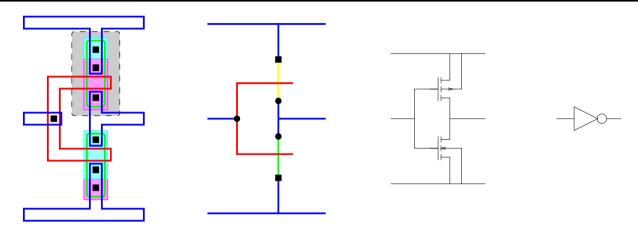

- Mask Level Design
 - Laborious Technology/Process dependent.
 - Design rules may change during a design!
- Transistor Level Design
 - Process independent, Technology dependent.
- Gate Level Design
 - Process/Technology independent.

Abstraction - Stick Diagrams

Stick diagrams give us many of the benefits of abstraction:

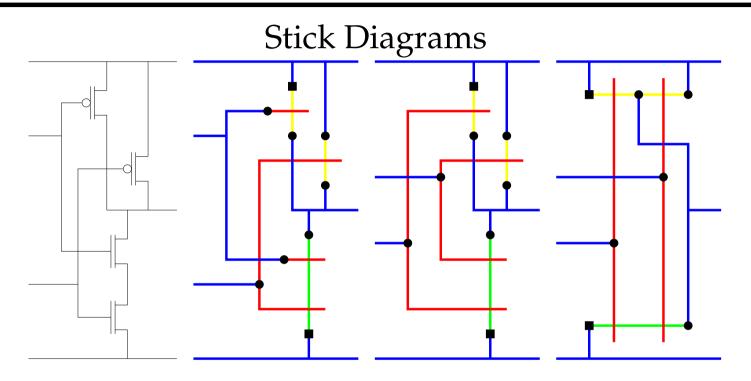

- Much easier/faster than full mask specification.
- Process independent (valid for any CMOS process).
- Easy to change.

while avoiding some of the problems:

• Optimized layout may be generated much more easily from a stick diagram than from transistor or gate level designs.¹

¹note that all IC designs must end at the mask level.

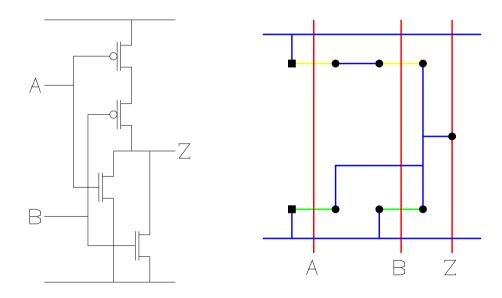

Stick Diagrams Metal Polysilicon N+ P+ Contact Tap Combined contact & tap

- Explore your Design Space.
 - Implications of crossovers.
 - Number of contacts.
 - Arrangement of devices and connections.

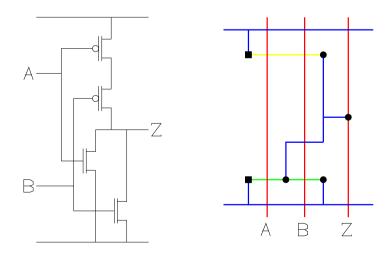

A logical approach to gate layout.

• All complementary gates may be designed using a single row of n-transistors above or below a single row of p-transistors, aligned at common gate connections.

Euler Path

- For the majority of these gates we can find an arrangement of transistors such that we can butt adjoining transistors.
 - Careful selection of transistor ordering.
 - Careful orientation of transistor source and drain.
- Referred to as *line of diffusion*.

Finding an Euler Path

Computer Algorithms

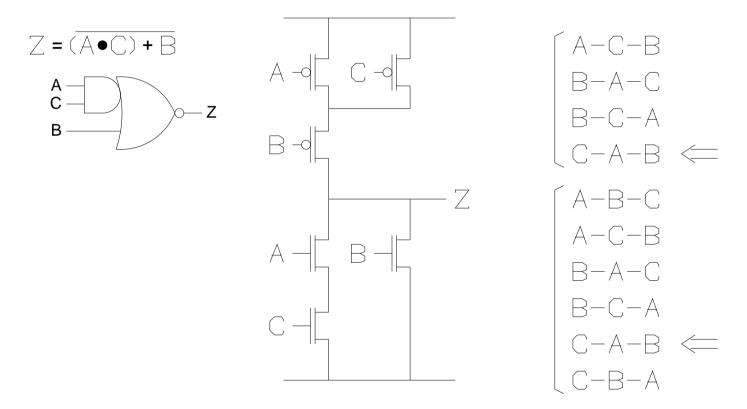

• It is relatively easy for a computer to consider all possible arrangements of transistors in search of a suitable Euler path.

This is not so easy for the human designer.

One Human Algorithm

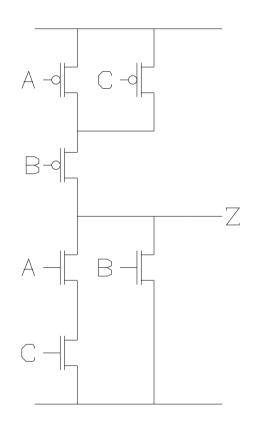

- Find a path which passes through all n-transistors exactly once.
- Express the path in terms of the gate connections.
- Is it possible to follow a similarly labelled path through the p-transistors?
 - Yes you've succeeded.
 - No try again (you may like to try a p path first this time).

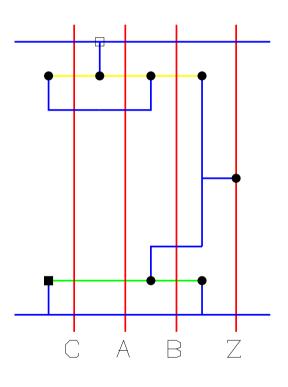

Finding an Euler Path

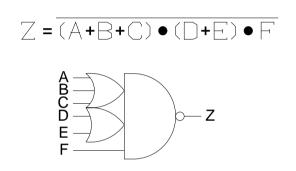

Here there are four possible Euler paths.

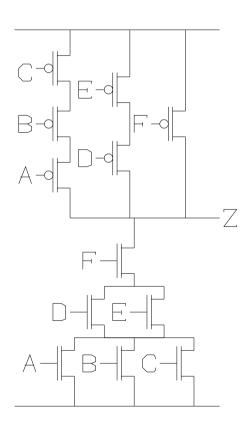

Finding an Euler Path

Finding an Euler Path

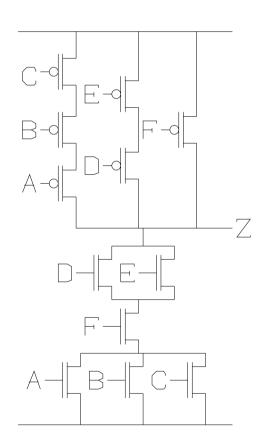

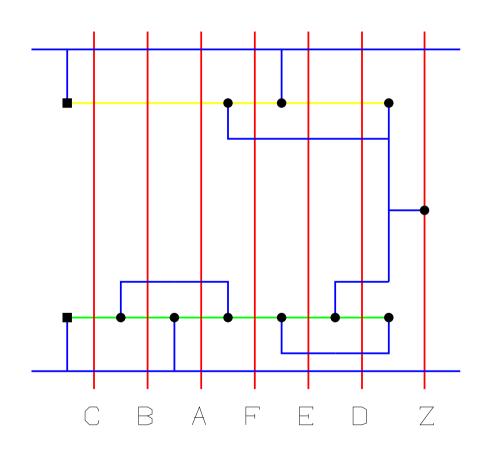

No possible path through n-transistors!

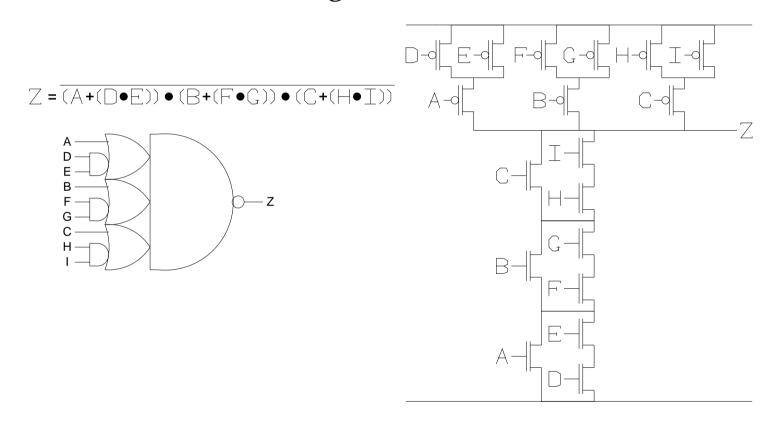

Finding an Euler Path

Finding an Euler Path

No possible path through p-transistors. No re-arrangement will create a solution!
