

A systematic review and economic evaluation of the effectiveness and generality of educational interventions for preventing catheter-related bloodstream infections in critical care

The protocol for this systematic review is currently being finalised by the project team and approved by external advisors. The protocol will then be posted on the HTA website. If you have any comments or queries about this process or feel that you are appropriately qualified to constructively review the protocol we would be pleased to hear from you.

Geoff Frampton, on behalf of the project team
